alogis-CustomerExtensionControl - clear management of system extensions in SAP®

A standard software package cannot cover all the specific features of a company. This is why the SAP system has Customer Extensions for customer-specific extensions to the programs. The interplay between standard and extensions must be controlled and managed, however, in order to avoid errors and for it to remain flexible.

This is precisely what the **alogis-CustomerExtensionControl** does. (alogis CEC) The use of Customer Extensions, i.e. User Exits, Call Customer Functions, BAdIs or Enhancement Points, increases the efficiency of the standard software package for companies. Individual, process-related competitive advantages can be presented using Customer Extensions.

However, comprehensive use of Customer Extensions can lead to difficulties if, for example, you want to analyse errors situations. In such cases, a thorough check needs to be carried out to see whether the error has been caused by the standard software or the extensions. In order to really be able to make effective use of Customer Extensions, they must be monitored and managed simply.

alogis-CustomerExtensionControl lets you do exactly that. All the information about each individual extension is managed in a maintenance dialogue.

In addition to a description of the extension, the maintenance dialogue displays whether the extension is active, i.e. whether the associated program code is running. If only certain users are permitted to use the function, for example for testing, the filter function can be used.

And that's not all.

alogis-CustomerExtensionControl defines individual business structures and stores corresponding data so that you can adequately manage processes.

Really easy to implement.

Implementing **alogis-CustomerExtensionControl** on an SAP system is easy: Install **alogis-CEC** and then integrate Customer Extensions into Customer Exits as required.

The **alogis-CustomerExtensionControl** is based on a 3-stage programming environment. This separates out:

- the basic functionality in the Customer Extension,
- functional extensions,
- and dialogue-oriented management.

This forms the basis for the extension and the customised design of the Customer Extensions.

Management

- Maintenance dialogue to manage Customer Extensions
- Filter function (e.g. users)
- Status management (active, testing)

Grouping

- Plausibility test for related Customer Extensions

Features

- Disconnect from Customer Extensions to limit errors in the Standard
- Controlled introduction of new functionality via key user
- Central extensions for different systems through client, system and release-specific management
- Support of templates for the rollout in separate systems
- Standardised form of extensions

System requirements
- SAP® ECC DIMP 5.0 or higher
- SAP® R/3® 4.7 with DI 4.7.1
